Requirements for Individual Project

Overall: The Plugin will create a fun and interactive mini-game in minecraft.

- The mini-game will use a timer to count down.

    - After the timer has started counting each player will be assigned a block.

    - If the player has not stood on top of the block in the time frame allotted, the player will die thus losing the game.

    - If the player has stood on top of the block in the time frame allotted, the timer will continue to count down until all players have stood on the block.

- The timer will restart if:

    - There is greater than 1 player in the game.

    - If a console command is run.

- The game will end if

    - There is atmost 1 player left.

    - If a console command is run.

- As an admin of the plugin I will be able to

    - Set the time of the timer.

    - Add/remove players to the game.

    - End the game.

    - Restart the timer.

    - Any other commands/actions an admin or player can run before the plugin is added to the game.
